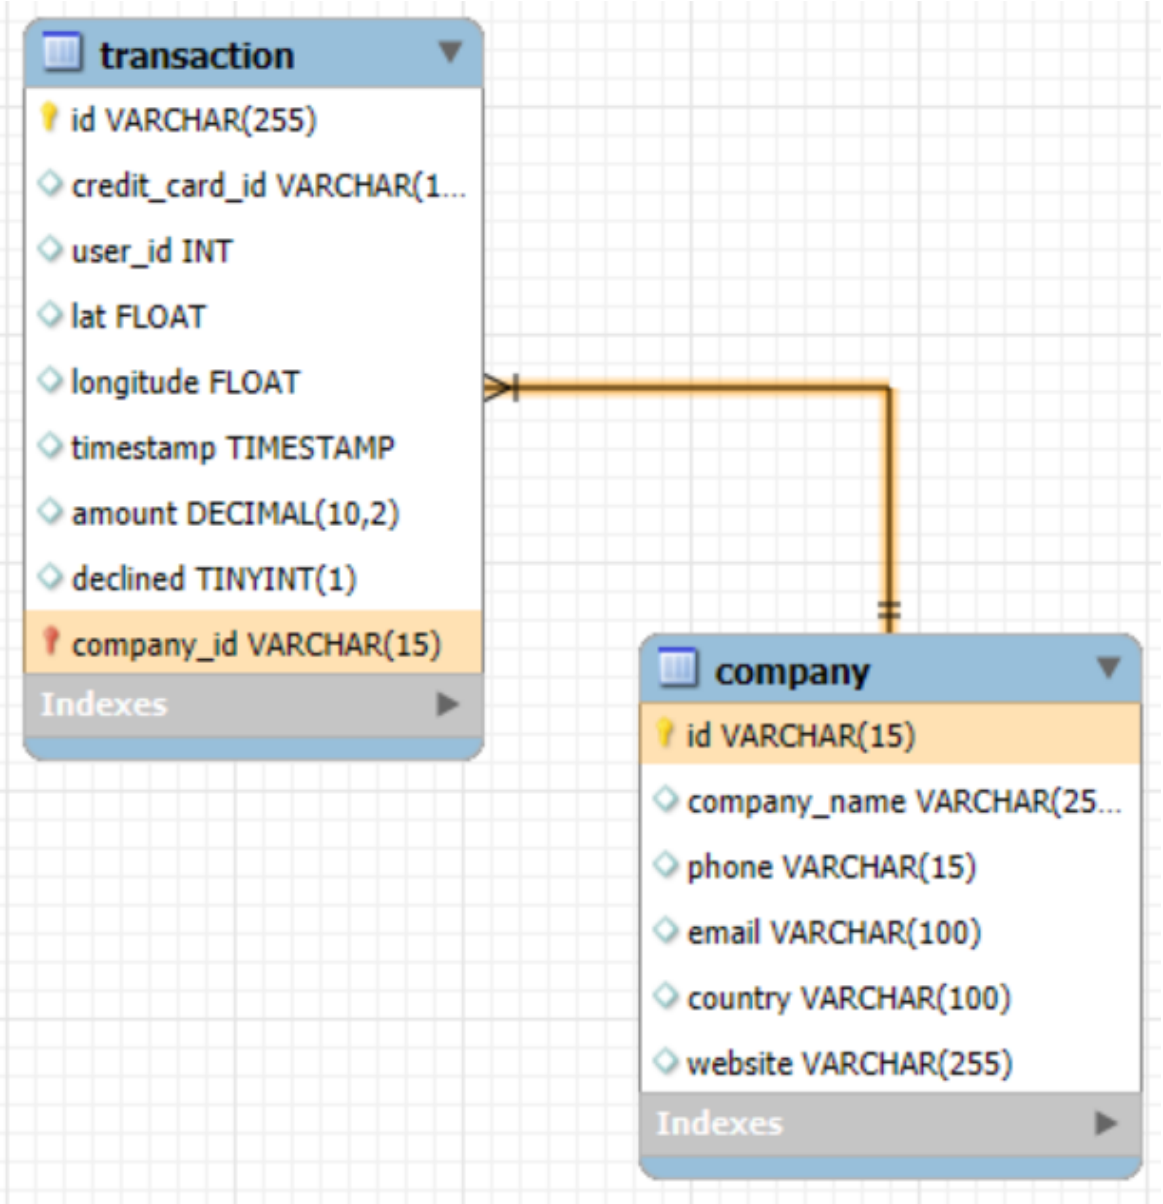
Sprint 2 corregido:

Nivell 1

- Exercici 1

A partir dels documents adjunts (estructura_dades i dades_introduir), importa les dues taules. Mostra les característiques principals de l'esquema creat i explica les diferents taules i variables que existeixen. Assegura't d'incloure un diagrama que il·lustri la relació entre les diferents taules i variables.



En este diagrama se ven todas las variables incluidas en las dos tablas en cuestión. Una tabla es la referente a las transacciones y la otra referente a la company. Ambas tablas se relacionan entre ellas a través de la PrimaryKey de company , **id**, la que conecta con **company_id** en la tabla de transacciones con una relación de 1 a

muchos. La tabla de transacciones es la tabla de hechos, por lo cual contiene todas las transacciones efectuadas por cada company.
La tabla de company tiene 100 registros con su respectiva id por lo cual existen 100 empresas.
La tabla de transacciones tiene 586 registros, por lo cual se han efectuado esa cantidad de transacciones.

SELECT * FROM company LIMIT 0, 50000	100 row(s) returned
SELECT * FROM transaction LIMIT 0, 50000	586 row(s) returned

- Exercici 2

Utilitzant JOIN realitzaràs les següents consultes:

- Llistat dels països que estan fent compres.

```
SELECT distinct country
FROM company
JOIN transaction
ON company.id = transaction.company_id
WHERE declined = 0;
```

503	12:19:51	SELECT distinct country FROM company JOIN transaction ON company.id = transa...	15 row(s) returned

Esta consulta devuelve una lista de todos los países (15) de las empresas que también están incluidas en la tabla de transacciones (por lo cual se han realizado compras desde ese país). Se utiliza el JOIN porque la tabla de transacciones no incluye información sobre los países.

- Des de quants països es realitzen les compres.

```
SELECT count(distinct country) as paises
FROM company
JOIN transaction
ON company.id = transaction.company_id
WHERE declined = 0;
